

## **International Ocean Freight Services**

With our global network of agents, Impact Supply Chain Solutions offers a complete range of ocean freight services designed to save your business both time and money. We manage all aspects of the supply chain process giving you door-to-door visibility of all your shipments between more than 100 ports worldwide. And because we have strategically based agents throughout North America and a worldwide network of partners, you can count on global coverage 24/7.

**Less than Container Load (LCL)** – Less than container loads are handled quickly and cost effectively through our global network of service providers. We will even make cost assessments based on volumes to determine when it makes more sense to ship FCL versus LCL to save you time and money.

**Full Container Load (FCL)** – Combined with our exclusive agent's volumes, ISCS offers you the kind of container volume discounts normally only reserved for the largest volume shippers. Our expertise in processing the containers through the port of entry makes our door-to-door service some of the fastest in the industry.

### **ISCS International Ocean Freight Services offers you and your customers the following benefits:**

- Complete door-to-door visibility and control over cost and transit time from pick up to ultimate delivery with 24/7 online tracking
- Booking arrangements with in-country agents who work closely with your suppliers to coordinate optimal routings, marine cargo insurance, crating and packing, tracking, and forwarding to ensure your ocean cargo arrives on time and damage free

Impact Supply Chain Solutions uses only C-TPAT (Customs-Trade Partnership Against Terrorism) member brokers and carriers. Many of these partners are at an Importer Self Assessment (ISA) status. This can lead to exemption from external audits by U.S. Customs and Border Protection (CBP) ultimately speeding the import clearance process.

ISCS specializes in custom solutions to your shipping needs, no matter what your volume requirements are. We welcome the opportunity to discuss how we can contribute to efficient and cost effective ocean freight shipping.
